Background

The 2015 Annual Abortion Report presents information derived from both the “Confidential Abortion Reports” and “Post-Abortion Care Reports for Complications” in Ohio (reporting forms are included as Appendices I and II). Readers should note that abortion statistics in this report are limited to terminations occurring in Ohio; they do not include Ohio residents who obtained abortions outside the state.

Characteristics of Induced Abortions Reported in Ohio, 2015

Induced abortion statistics have been prepared in Ohio since 1976. Several trend comparisons in the 2015 Annual Abortion Report date back to 2002. A total of 20,976 induced pregnancy terminations were reported in Ohio for 2015, including 19,765 obtained by Ohio resident women (94.2%). This represents a 1% reduction in induced pregnancy terminations from 2014 to 2015. Overall, since 2001 there has been a steady decline in terminations. When examined from 2001 to 2015, the annual decline averaged approximately 930 per year (Figure 1).

Approximately one in ten women who obtained abortions in 2015 were under 20 years of age, with another third between the ages of 20-24 years of age (Table 2). While the age distribution of women obtaining abortions has remained relatively unchanged since 2001, the age-specific abortion rates for women under age 25 have steadily decreased (Figure 5). Approximately 85% of women with known marital status who obtained abortions were never married, divorced, or widowed (Table 2). Fifteen percent of women who obtained abortions and whose marital status was known were married or separated (Table 2).

Fifty-two percent of resident women who obtained abortions and for whom race was reported were White; 42% were African American; 3% were Asian/Pacific Islander; and 3% reported more than one race. Four percent of women with known ethnicity who obtained abortions were of Hispanic origin (Table 1).

The 2015 Ohio abortion rate was 8.9 per 1,000 resident women ages 15-44 years old; down from 9.0 in 2014 (Figure 4). The 2015 Ohio resident abortion ratio was 142 abortions per 1,000 live births, down from 147 in 2014 (Figure 4).

More than half of all induced abortions involved pregnancies of less than nine weeks (52%), with approximately 32% involving pregnancies of nine to 12 weeks (Table 2). The proportion involving abortions of less than nine weeks increased from 49% in 1997, while the proportion between nine and 12 weeks declined from 35% to 32% (Figure 7). There were 478 abortions in 2015 involving pregnancies of 19 or more completed weeks of gestation (Table 2). That represents a decrease from the 510 reported in 2014. The abortion reporting form requests method used to determine gestational age: ultrasound used in 99% of cases (Table 8b). The vast majority of reported abortions were obtained in six major metropolitan areas of Ohio.

Curettage was the most used method of termination in 2015 (80%) (Table 7). That method has decreased since 2001 when 87% of terminations were by curettage. Mifepristone was reported as the medication for non-surgical termination for 791 abortions, followed by 343 terminations using methotrexate, and 296 terminations using misoprostol (Table 7).

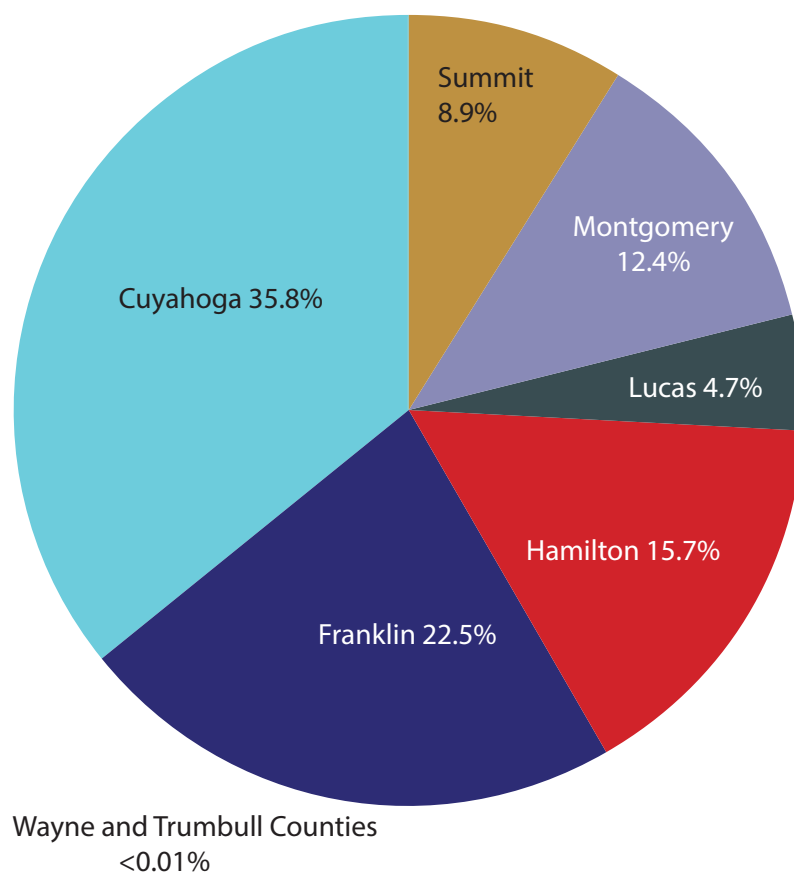

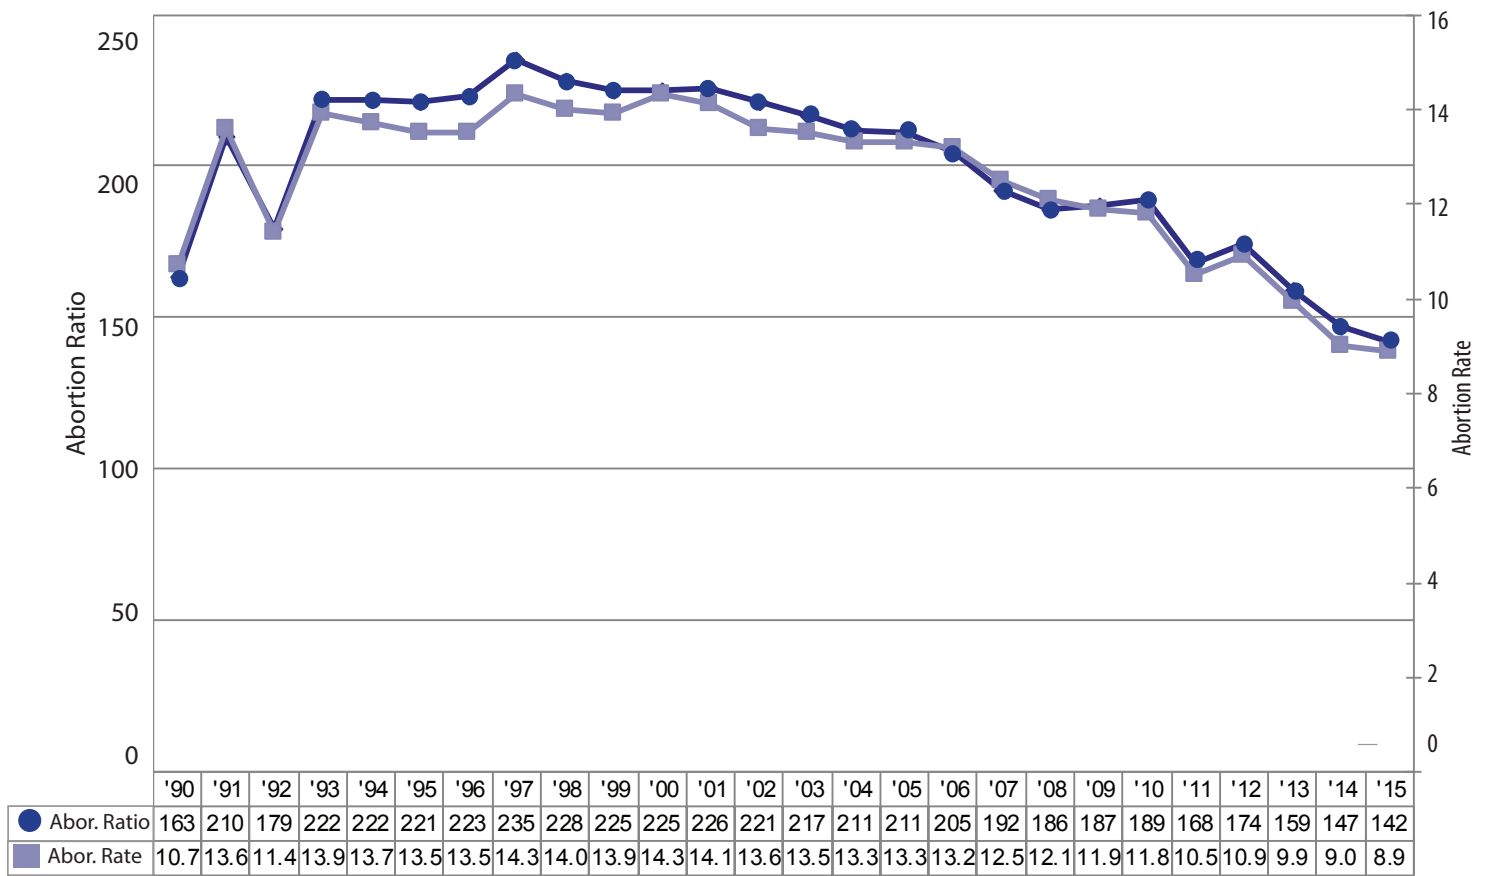

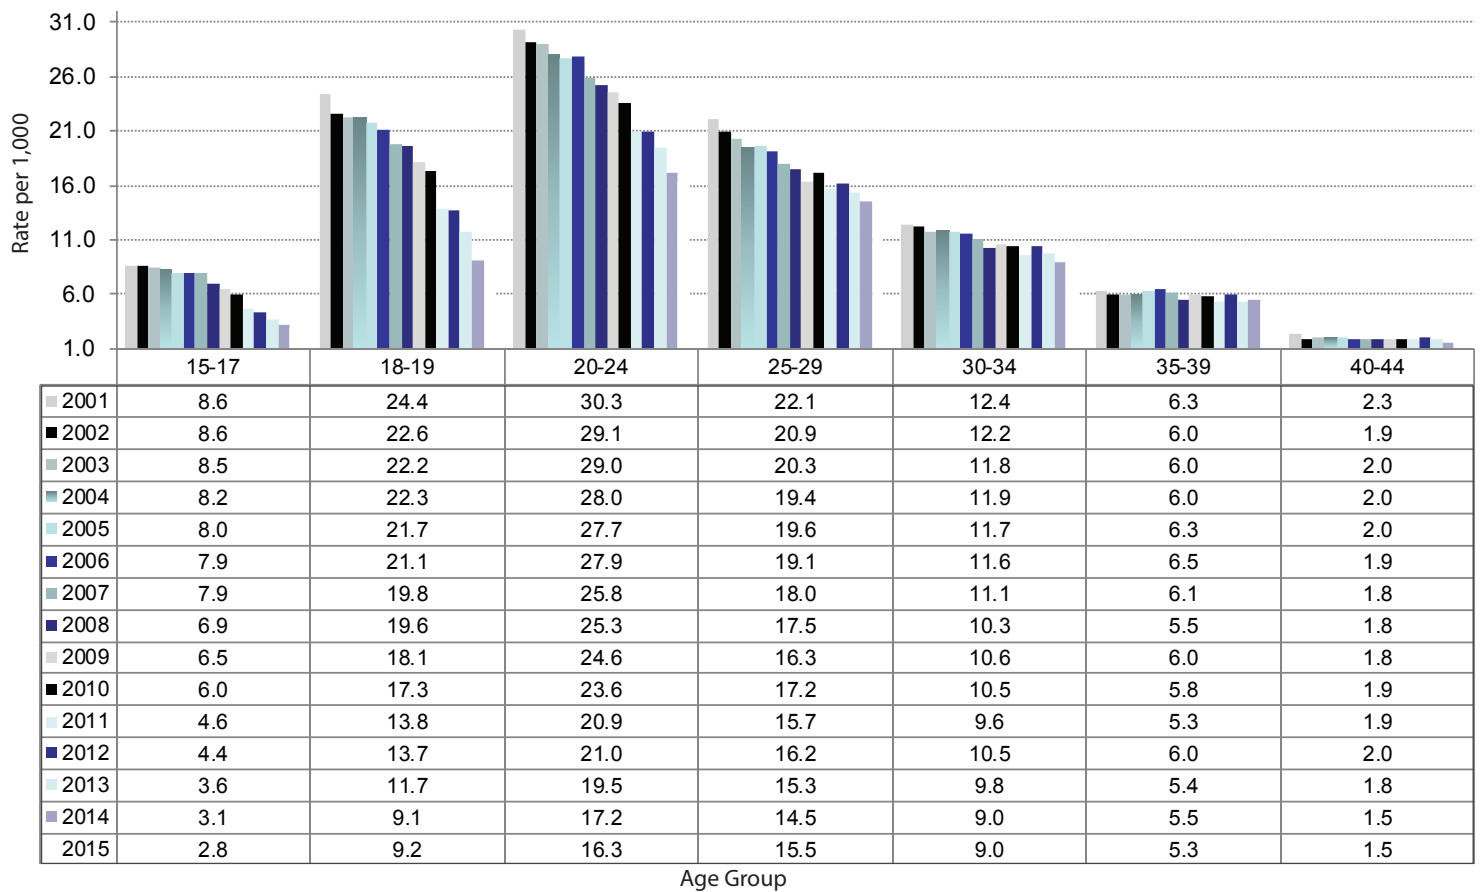

Figure 4. Abortion Ratio and Abortion Rate, by Year, Ohio Residents, 1990 - 2015

Abortion ratio is number of abortions per 1,000 live births.

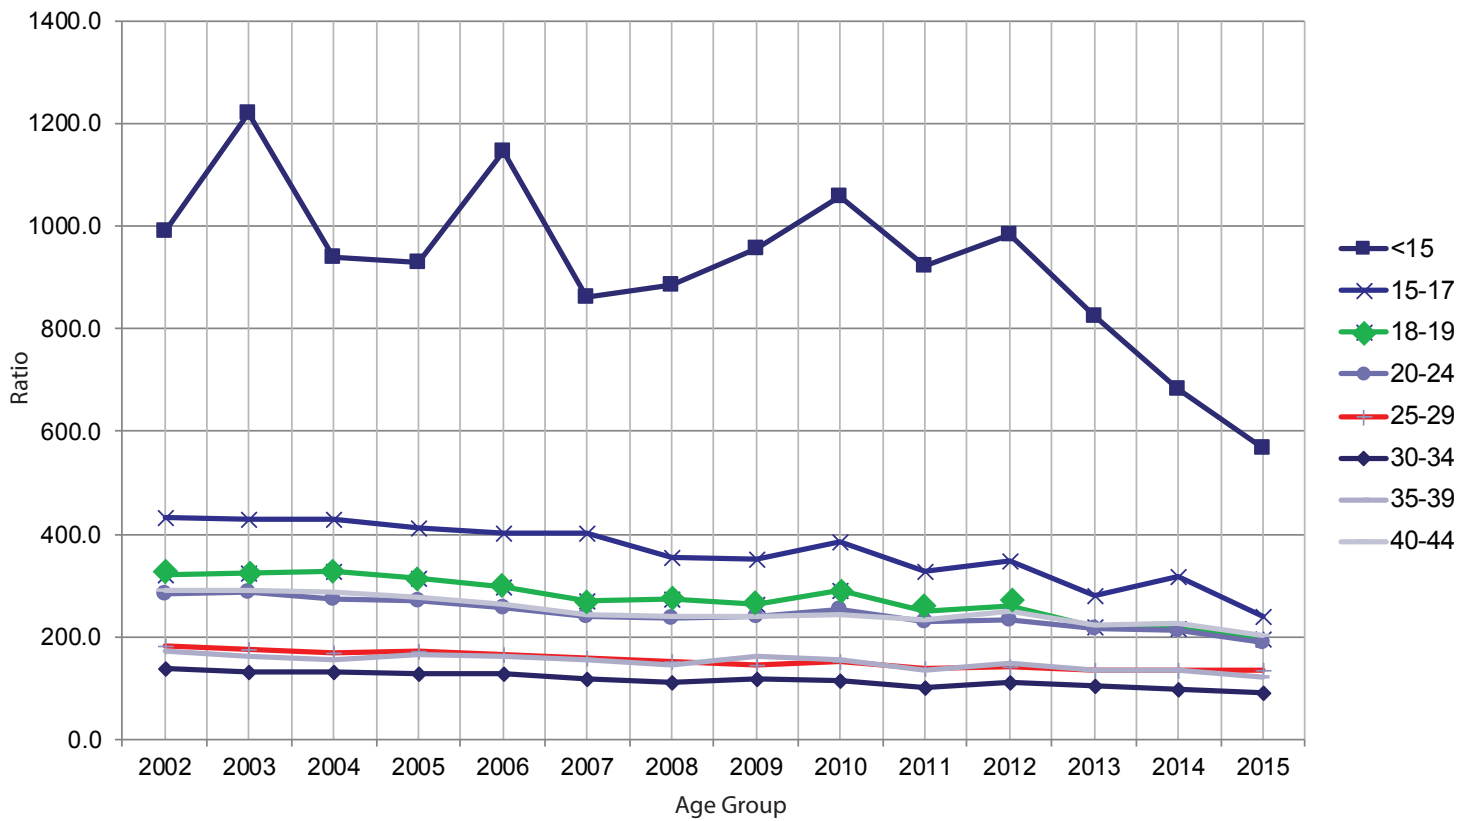

Abortion rate is number of abortions per 1,000 women ages 15-44.

Figure 5. Induced Abortion Rates per 1,000 Women by Age and Year, Ohio Residents, 2001 - 2015

Abortion rate is number of abortions per 1,000 female population in specified age group.

Figure 6. Induced Abortion Ratio, by Age Group, and Year Ohio Residents, 2002 - 2015

Abortion ratio is number of abortions per 1,000 live births in a specified age group.
