Background

The 2018 Annual Abortion Report presents information derived from both the Confidential Abortion Reports and Post-Abortion Care Reports for Complications in Ohio; reporting forms are included as Appendices I and II. Readers should note that abortion statistics in this report are limited to terminations occurring in Ohio; they do not include Ohio residents who obtained abortions outside the state.

Characteristics of Induced Abortions Reported in Ohio, 2018

Induced abortion statistics have been prepared in Ohio since 1976. Several trend comparisons in the 2018 Annual Abortion Report date back to 2004. A total of 20,425 induced pregnancy terminations were reported in Ohio for 2018; including 19,213 obtained by Ohio resident women (94.1%). This represents a 2% decrease in induced pregnancy terminations from 2017-18. Overall, since 2001 there has been a steady decline in terminations. When examined from 2001-18, the annual decline averaged approximately 1,000 per year (Figure 1).

Approximately one in ten women who obtained abortions in 2018 were under age 20; with another one-third between 20-24 (Table 2). While the age distribution of women obtaining abortions has remained relatively unchanged since 2001, the age-specific abortion rates for women under 25 have steadily decreased (Figure 5). Approximately 85% of women with known marital status who obtained abortions were never married, divorced, or widowed (Table 2). Approximately 15% of women who obtained abortions and whose marital status was known were married or separated (Table 2). Approximately 48%

of resident women who obtained abortions and for whom race was reported were White; 44% were African American; 4% were Asian/Pacific Islander; and 4% reported more than one race (Figure 2). Around 6% of women with known ethnicity who obtained abortions were of Hispanic origin (Table 1).

The 2018 Ohio abortion rate was 8.7 per 1,000 resident women ages 15-44, which slightly decreased from the rate in 2017 (Figure 4). The 2018 Ohio resident abortion ratio was 142 abortions per 1,000 live births, which slightly decreased from the ratio in 2017 (Figure 4).

More than half of all induced abortions involved pregnancies of less than nine weeks (56%), with approximately 30% involving pregnancies of nine to 12 weeks (Table 2). The proportion involving abortions of less than nine weeks increased from 49% in 1997, while the proportion between nine and 12 weeks declined from 35% to 30% (Figure 7). There were 488 abortions in 2018 involving pregnancies of 19 or more completed weeks of gestation (Table 2). That represents an increase from the 454 reported in 2017. The abortion reporting form requests methods used to determine gestational age: ultrasound was used in 91% of cases (Table 8b). The vast majority of reported abortions were obtained in six major metropolitan areas of Ohio (Table 6).

Curettage was the most used method of termination in 2018 (56%) see Table 7. That method has decreased since 2001 when 87% of terminations were by curettage. Mifepristone was reported as the medication for non-surgical termination for 6,103 abortions, followed by 582 terminations using Misoprostol, and two terminations using Methotrexate (Table 7).

Figure 3. Induced Abortions Reported in Ohio, by County of Occurrence, 2018

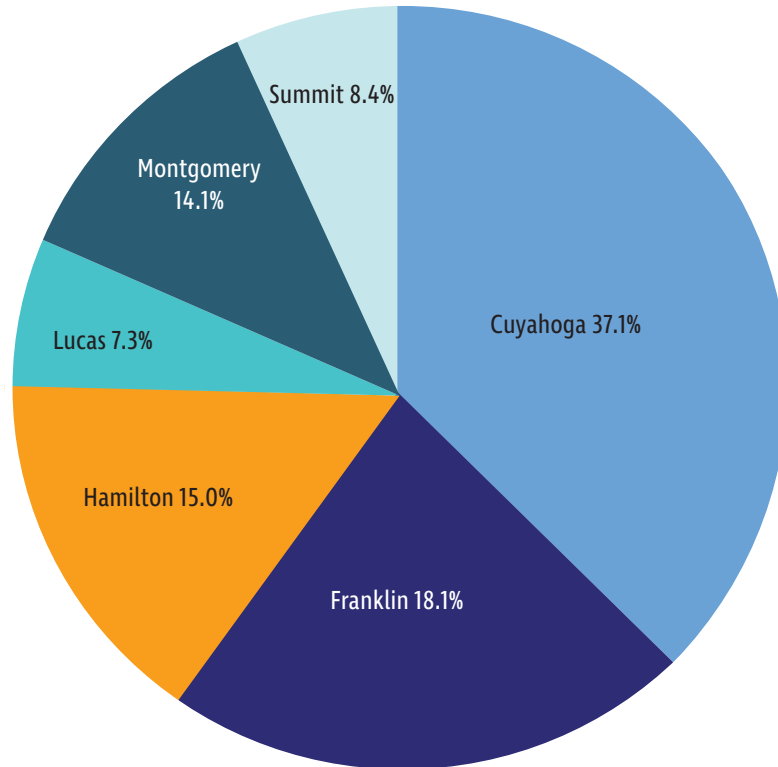

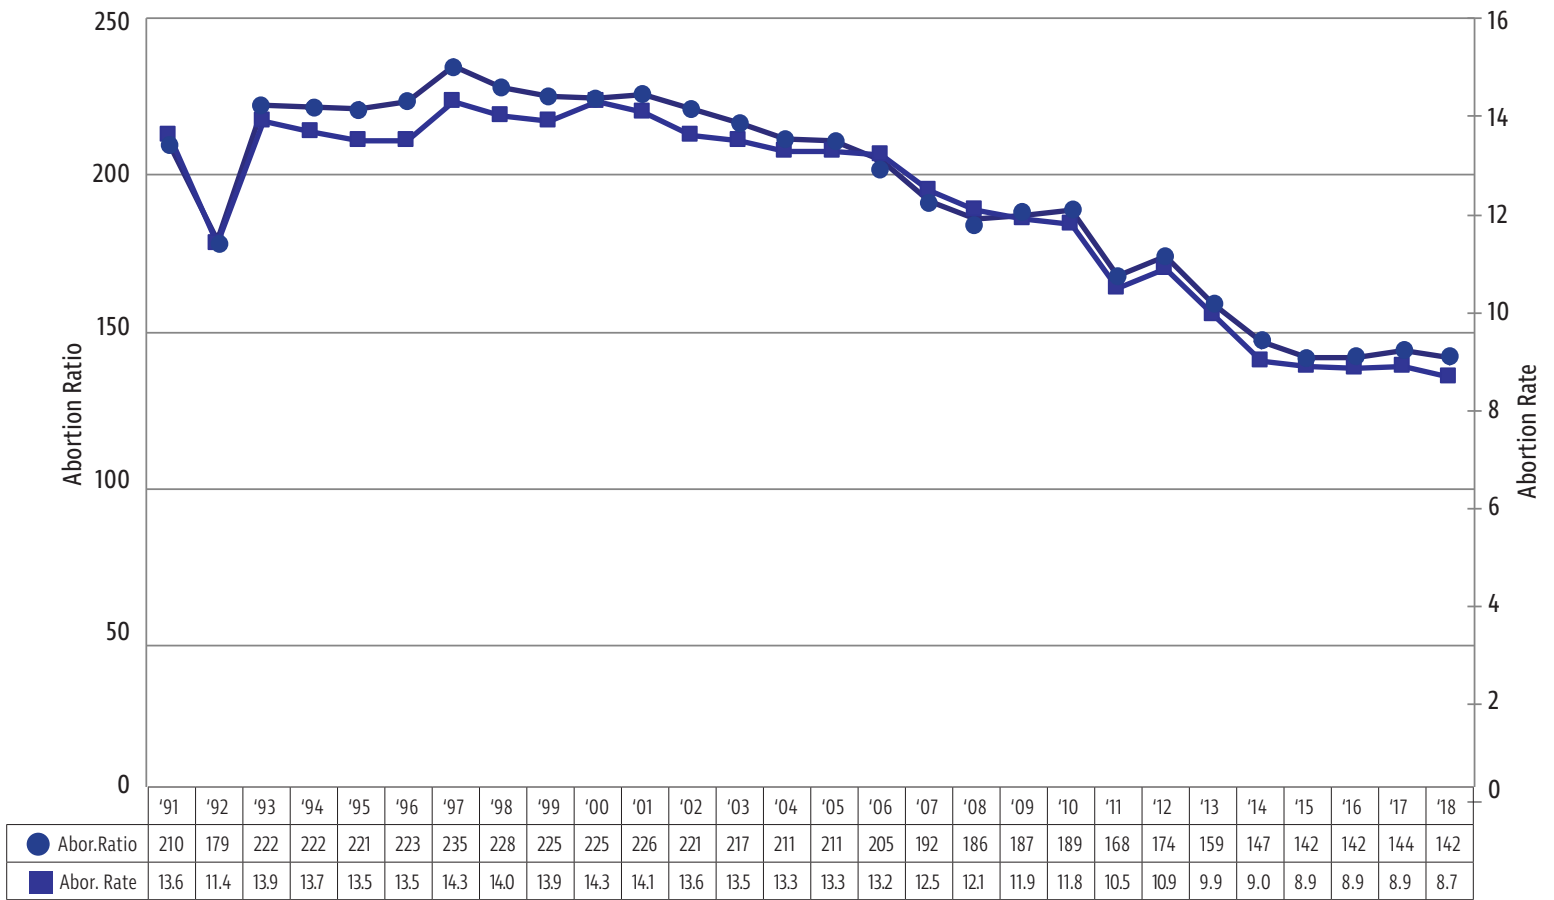

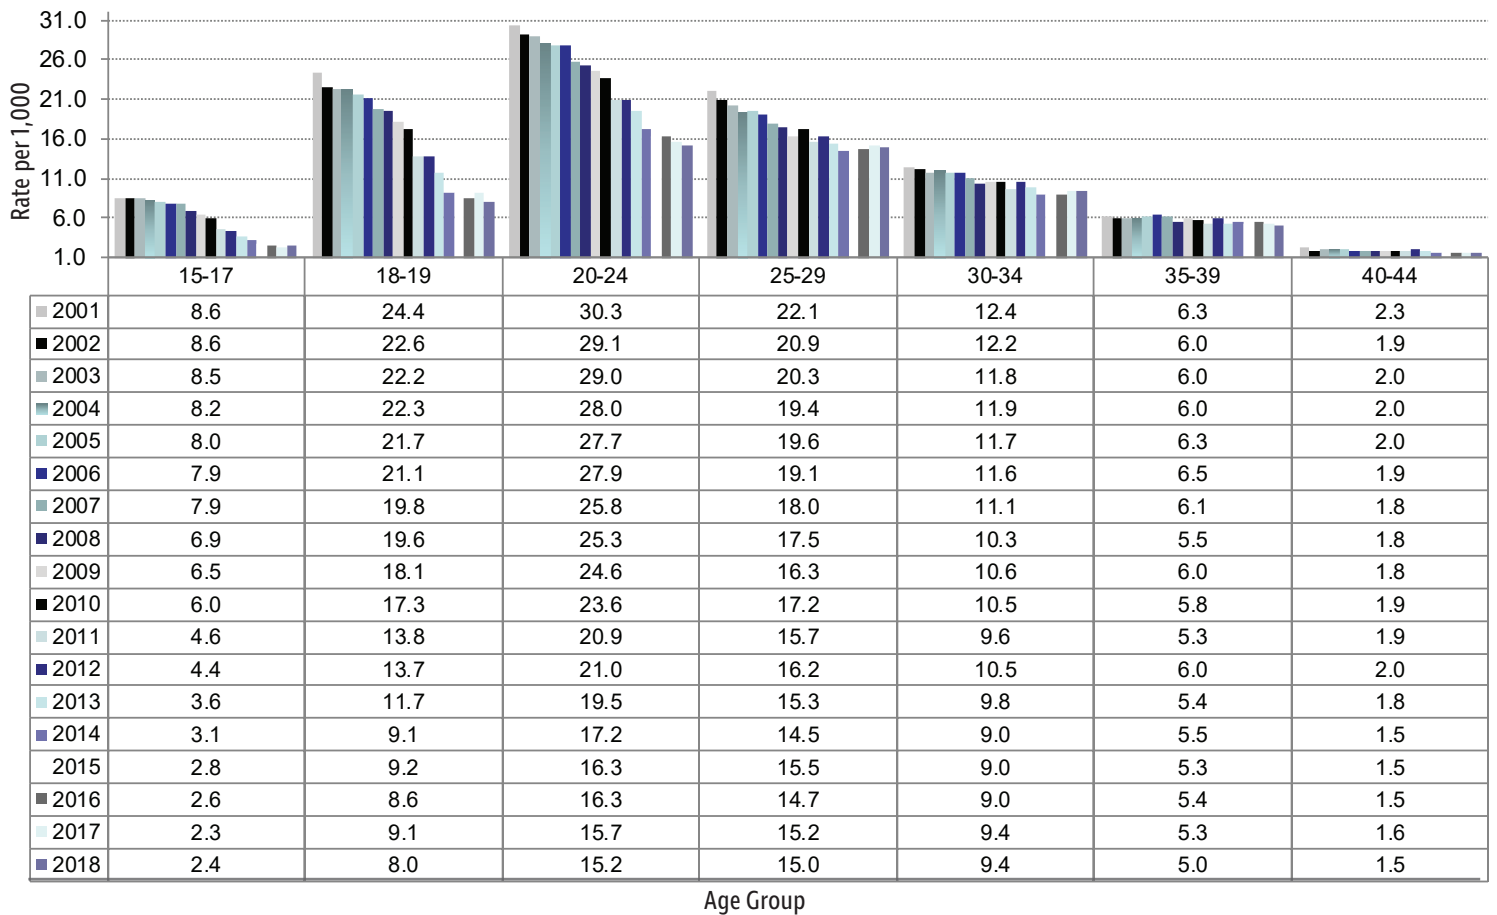

Figure 4. Abortion Ratios and Abortion Rates, by Year, Ohio Residents, 1991-2018

Abortion ratio is number of abortions per 1,000 live births.

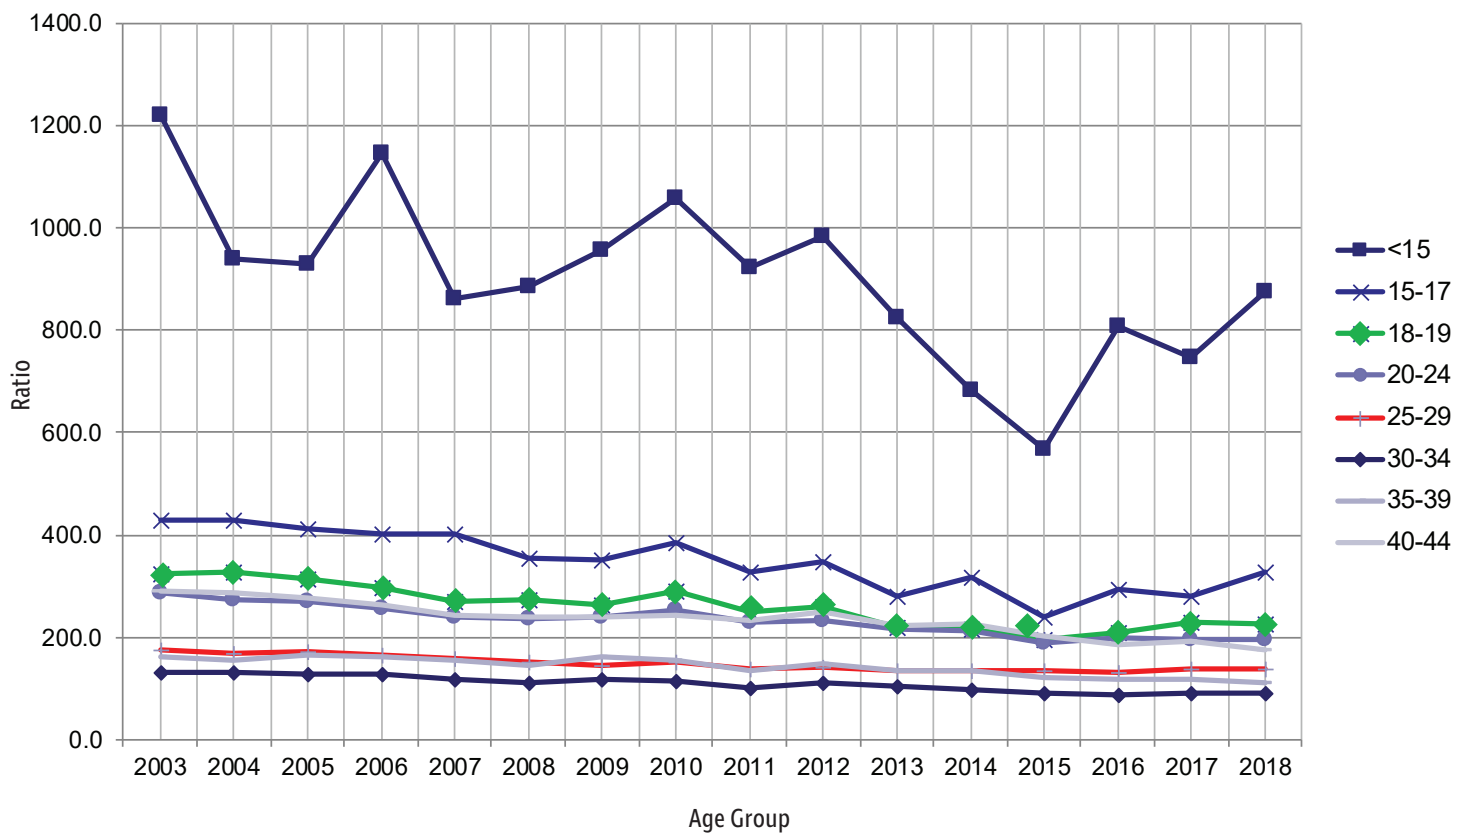

Abortion rate is number of abortions per 1,000 women ages 15-44.

Figure 5. Induced Abortion Rates per 1,000 Women, by Age Group and Year, Ohio Residents, 2001-18

Abortion rate is number of abortions per 1,000 female population in a specified age group.

Figure 6. Induced Abortion Ratios, by Age Group and Year, Ohio Residents, 2003-18

Abortion ratio is number of abortions per 1,000 live births in a specified age group.
