

Immunization Quality Improvement for Providers (IQIP) Program

The IQIP program is a provider level quality improvement process designed by the Centers for Disease Control and Prevention (CDC) and supported by the Ohio Department of Health (ODH).

IQIP uses evidence-based approaches and best practices to promote and support implementation of provider-level strategies designed to help increase on-time vaccination of children and adolescents.

During an IQIP cycle, trained quality improvement consultants will guide immunization providers through various immunization quality improvement activities. The IQIP consultant will provide technical assistance to aid in implementation.

The process includes an initial site visit (either in-person or virtual) lasting approximately 45 minutes, two 10-minute check-in calls, and a final 12-month follow-up call or in-person visit.

IQIP uses both qualitative and quantitative data to assess successful implementation of quality improvement strategies tailored to your office. Immunization coverage reports are run at the initial visit and at the final visit to assess year-over-year change.

After the 12-month process, providers often see an improvement in their immunization workflow and patient care. Many providers also see an improvement in their vaccine coverage among their pediatric and adolescent patients.

Providers who completed the program by February 2024 saw an increase in both their pediatric and adolescent patients' immunization coverage.
