

Childhood Lead Poisoning

Notes:

1. The table above contains data for children less than 72 months (6 years) of age at the time of test.
2. Blood Lead Levels reflect the highest confirmed, or highest test for the year.
3. Elevated Blood Lead Levels (EBLLs) are shown in red.
4. Table contains preliminary data and may be updated quarterly.
5. µg/dL = a measurement tool; micrograms per deciliter of blood.
6. Blood lead levels reflect the highest confirmed test during the year if a confirmed test exists for the child, or the highest test for the year, otherwise.
7. Unconfirmed EBLLs are defined as tests for children who had an elevated capillary test and did not receive an elevated confirmatory test within 90 days.
8. Only cities with 500 or more children tested in 2012 are listed.
9. City columns do not have totals because all Ohio cities are not listed.

The table below demonstrates the number of children tested and determined to have elevated blood lead levels during 2012:

City	Total Children Screened	<5 µg/dL	5-9 µg/dL	Confirmed Elevated Blood Lead Levels (EBLLs)				Total EBLLs	% EBLLs	Unconfirmed EBLLs
				10-14 µg/dL	15-19 µg/dL	20-24 µg/dL	≥25 µg/dL
