Suicide Deaths in Ohio

Suicide was the second-leading cause of death among Ohioans ages 10-14 and 20-34 and the 12th-leading cause of death in Ohio overall.

In 2023, there were 1,777 suicide deaths in Ohio. This was a 1% decrease in the number of deaths from 2022.

Figure 1. Number and Age-Adjusted Rate of Suicide Deaths by Year, Ohio, 2014-2023**

In 2023, Ohio's age-adjusted rate of 14.6 suicide deaths per 100,000 population also marked a decrease from the age-adjusted rate of 15.0 suicide deaths per 100,000 population seen in 2022. Age-adjusted rate of deaths per population is a conventional statistical adjustment done in accordance with CDC standards to account for the difference in expected death rates among different age ranges.

Figure 2. Number of Suicide Deaths by Quarter, Ohio, 2021-2023

The number of suicide deaths increased each quarter in 2021.

In 2022 and 2023, the number of suicide deaths by quarter remained relatively steady, ranging from 434 to 463 deaths per quarter.

****At the time of this report, population files from the federal government reflecting new national standards and methodologies were available for 2020 through 2023 only. Because of this change, the Ohio Department of Health (ODH) advises caution in comparing these rates to those from years prior to 2020, as indicated by the segmented line in the graphic.**

Source: ODH Bureau of Vital Statistics. Analysis: ODH Violence and Injury Epidemiology and Surveillance Section (VIESS). Includes Ohio residents who died due to suicide (underlying cause of death International Classification of Diseases, Tenth Revision [ICD-10], codes X60-X84, Y87.0, *U03.)

FAST FACTS

- In 2023, 1,777 Ohioans died by suicide, a 1% decrease from 2022, compared with a national decrease of <1%.¹
- From 2022 to 2023, Black non-Hispanic females and White non-Hispanic females had the largest decreases in the rate of suicide deaths (both -6%).
- In 2023, Ohioans aged 45-54 years had the highest rate of suicide deaths.
- Among males in 2023, those aged 75 years and older had the highest rate of suicide deaths.
- Firearms were involved in more than half of all suicide deaths.
- From 2022 to 2023, the number of suicide deaths by drug poisoning increased 11%.

¹Source: National Center for Health Statistics, Provisional Multiple Cause of Death Data on CDC WONDER <https://wonder.cdc.gov/mcd.html> (Accessed Oct. 18, 2024)

Mechanism

From 2022 to 2023:

- The number of suicide deaths by firearm decreased 1%, from 1,046 to 1,031 deaths.
- The number of suicide deaths by suffocation (e.g., hanging) decreased 7%, from 438 to 407 deaths.
- The number of suicide deaths by drug poisoning increased 11%, from 156 to 173 deaths.

Figure 3. Number of Suicide Deaths by Mechanism, Ohio, 2019-2023

Figure 4. Percentage of Suicide Deaths by Mechanism and Sex, Ohio, 2023

In 2023, firearm was the leading mechanism of suicide deaths among both females and males; however, the percentage of suicide deaths by firearm was notably higher among males (62%) compared with females (41%).

In contrast, suicide by drug poisoning accounted for a higher percentage of suicide deaths among females (26%) compared with males (6%) in 2023.

Mechanism

In 2023:

- Firearm was the leading mechanism of suicide deaths among all age groups shown below. Those aged 65 and older had the highest percentage of firearm-involved suicide deaths (75%).
- Those aged 35-44 had the highest percentage of suffocation-involved suicide deaths (37%).
- The percentage of suicide deaths by drug overdose peaked at the ages of 45-54 (16%).

Figure 5. Percentage of Suicide Deaths by Mechanism and Age, Ohio, 2023

Figure 6. Percentage of Suicide Deaths by Mechanism and Race/Ethnicity, Ohio, 2023

In 2023:

- The percentage of suicide deaths by firearm was highest among the Black non-Hispanic population (68%), followed by the White non-Hispanic population (58%).
- The percentage of suicide deaths by suffocation was highest among the Asian/Pacific Islander non-Hispanic population (52%).
- The percentage of deaths by drug poisoning was highest among the White non-Hispanic population (10%).

Mechanism Summaries

This data reflects updated national standards used in the creation of race categories. Caution should be used when comparing data to that of previous reports using a different methodology to categorize race. Other race and ethnicity groups are not presented due to small numbers.

¹Total includes all suicide deaths among Ohio residents.

Demographics: Age and Sex

In 2023, Ohioans aged 45-54 had the highest rate of suicide deaths (20.1 per 100,000 population), followed closely by those aged 25-34 (19.9 per 100,000 population).

From 2022 to 2023:

- Ohioans aged 55-64 had the largest increase in the rate of suicide deaths (10%), followed by the those aged 45-54 (4%).
- Ohioans aged 35-44 had the largest decrease in the rate of suicide deaths (-11%), followed by youth aged 10-24 (-6%).

Figure 7. Rate¹ of Suicide Deaths by Age Group and Year, Ohio, 2020-2023

Figure 8. Number of Suicide Deaths by Age and Sex, Ohio, 2023

Figure 9. Rate of Suicide Deaths by Age and Sex, Ohio, 2023

From 2022 to 2023, the number of suicide deaths among females decreased 7% compared with a 0.4% increase among males. In 2023, males accounted for 81% of total Ohio suicide deaths.

In 2023:

- Among males, those aged 25-34 had the highest number of suicide deaths, while those aged 75 years and older had the highest rate of suicide deaths.
- Among females, those aged 25-34 had the highest number of suicide deaths, while those aged 45-54 had the highest rate of suicide deaths.

¹ Rates presented for age groups are age-specific. Overall Ohio rates are age-adjusted to the 2000 U.S. standard population to allow a comparison of the overall risk of dying between different populations.

Demographics: Race/Ethnicity

In 2023, the White non-Hispanic population continued to have the highest rate of suicide deaths.

From 2022 to 2023, the Asian/Pacific Islander non-Hispanic population was the only race/ethnicity group for which the rate of suicide deaths increased (12%). Asian/Pacific Islander non-Hispanic Ohioans accounted for 3% of the overall population and 1.4% of suicide deaths (N=25) in 2023.

From 2022 to 2023, suicide death rates among both the Black non-Hispanic and the White non-Hispanic populations decreased 2%, while the Hispanic population decreased 6%.

Figure 10. Age-Adjusted Rate of Suicide Deaths by Race/Ethnicity, Ohio, 2020-2023

Figure 11. Age-Adjusted Rate of Suicide Deaths by Sex and Race/Ethnicity, Ohio, 2020-2023

In 2023, White non-Hispanic males continued to have the highest rate of suicide deaths.

From 2022 to 2023:

- Black non-Hispanic females and White non-Hispanic females had the largest decreases in the rate of suicide deaths (both -6%).
- The rate of suicide deaths among White non-Hispanic males decreased 1%, while the rate among Black non-Hispanic males remained unchanged from the previous year.

This data reflects updated national standards used in the creation of race categories. Caution should be used when comparing data to that of previous reports using a different methodology to categorize race. Other race and ethnicity groups are not presented due to small numbers.

This data reflects updated national standards used in the creation of race categories. Caution should be used when comparing data to that of previous reports using a different methodology to categorize race. Other race and ethnicity groups are not presented due to small numbers.

¹The death rates presented for age groups are age-specific. The death rates presented for sex and race/ethnicity are age-adjusted to the 2000 U.S. standard population to allow a comparison of the overall risk of dying between different populations. Rates are suppressed when there are fewer than 10 total deaths.

²Total includes all suicide deaths among Ohio residents.

Demographics: County

Figure 12. Average Age-Adjusted Rate of Suicide Deaths by County¹, Ohio, 2020-2023

From 2020 to 2023, Vinton County had the highest suicide death rate (31.6 per 100,000 population).

Of the 16 counties with the highest suicide death rates, 14 were rural (11 rural, Appalachian and three rural, non-Appalachian).

Source: ODH Bureau of Vital Statistics. Analysis: ODH Violence and Injury Epidemiology and Surveillance Section. Includes Ohio residents who died due to suicide (underlying cause of death ICD-10 codes X60-X84, Y87.0, *U03).

¹ County is determined by county of residence.

*Rates are suppressed when there are fewer than 10 total deaths.

Note:

Coroners have up to six months to complete death investigations. Due to reporting timelines and the processing of Ohio mortality records by ODH Bureau of Vital Statistics and the Centers for Disease Control and Prevention's National Center for Health Statistics, Ohio mortality data for 2023 was finalized Sept. 30, 2024.
