

# Legacy GMIS vs. New GMIS/GMIS Portal Differences

This document outlines some of the biggest differences between Legacy GMIS and new GMIS Portal.  
*Please note, this list is not exhaustive.*

## GMIS PORTAL

Overall, processes remain the same (unless noted below), with updates primarily focused on the new technology.

Legacy GMIS	GMIS Portal
All agency users have the same access in Legacy GMIS.	Users in GMIS Portal will be designated as either Primary or Secondary users. Each agency must have 2–4 Primary users, with unlimited Secondary users. Only Primary users can perform certain actions, such as editing the agency profile, adding users, starting and submitting applications, and submitting expense reports.
ODH manages Legacy GMIS account information and agency access.	Primary users will now be responsible for managing their agency’s information and controlling access to GMIS Portal.
ODH provides the project number, username and password.	Users will access GMIS Portal by logging into <a href="#">MyOhio</a> with their 5x OH ID and password > My Resources > GMIS Portal Tile.
Submit a Notice of Intent to Apply.	Will no longer submit a “Notice of Intent to Apply.”
All direct communication between ODH and agencies is through email.	The in-GMIS Portal communication tool, Chatter, will now be used for communication with ODH after the award is accepted. This ensures all correspondence and history are centralized.
Agencies submit their agency forms with each application.	Certain agency forms will be stored in the agency’s profile rather than uploaded with each application. Agencies will receive notifications to update these forms when they expire.
Much of the submitted information for forms, budgets, workplans, expense report sand progress reports were file upload.	More information will be entered directly into GMIS Portal instead of being uploaded as files, particularly in forms, budgets, work plans, expense reports, and progress reports.
Notice of Award was auto accepted.	Agencies must now accept the Notice of Award via a button in GMIS Portal.
The system sends some notifications and reminders.	The system will send more notifications and reminders via email and within GMIS Portal.

Indirect Cost is stored as a line item under 'Other Direct Costs' with type = Indirect Cost.

We are automatically calculating Indirect Cost based on the Federal % or if Agencies have their own federal approved rate. This gets stored in separate rows on their expense report and when they expense indirect cost, they will do so at the line item level. Example – John is a personnel line item with indirect costs, if I start an expense report the system will automatically calculate how much is being expensed towards indirect costs and the subrecipient can adjust it.
