## Appendix C

### ODH Evidence of Health Equity Strategies Checklist

This checklist should be used to support planning, implementation, and evaluation of equitable strategies to reduce disparities and overcome social determinants of health. This checklist is a guide to establish a baseline criterion that all projects funded by ODH to support alignment with established priorities to achieve optimal health for all Ohioans.

#### Health Disparities, Health Inequities, Social Determinants of Health & Health Equity

Racial and ethnic minorities, those living in rural communities, people with disabilities, the LGBTQ community and Ohio's economically disadvantaged residents do not have the same opportunities as other groups to achieve and sustain optimal health. Health disparities occur when these groups experience more disease, death or disability beyond what would normally be expected based on their relative size of the population. Health disparities are often characterized by such measures as disproportionate incidence, prevalence and/or mortality rates of diseases or health conditions. Health is largely determined by where people live, learn, work, play, and age. Health disparities are unnatural and occur because of low socioeconomic status, race/ethnicity, sexual orientation, gender, disability status, geographic location or some combination of these factors. Those most impacted by health disparities also tend to have less access to resources like healthy food, safe housing, quality education, safe neighborhoods and freedom from racism and other forms of discrimination. These are referred to as **social determinants of health (SDOH)**. SDOH are a root cause of health disparities. The systematic nature of health disparities is considered unjust and is referred to as **health inequities**. The ability of everyone to have the same opportunity to achieve the best health possible is referred to as **health equity**. Programs that incorporate social determinants into the planning and implementation of interventions will greatly contribute to advancing health equity.

The ODH is committed to the elimination of health disparities and achieving health equity for all Ohioans. The items below are requirements for all applicants to ensure health equity is embedded within all components of the application (e.g., Goals, Program Narrative, and Objectives.)

- 1) Identify specific groups who experience a disproportionate burden of disease, health condition or health outcome targeted by this solicitation. See Ohio's State Health Assessment Ohio's health data. <https://odh.ohio.gov/wps/portal/gov/odh/explore-data-and-stats/interactive-applications/2019-online-state-health-assessment>
- 2) [Identify geographic reference points \(i.e., census tracts, census block groups or zip codes\) to specify where program activities are focused.](#)
- 3) Use direct or indirect feedback from the prioritized population, community, group, or community agency to identify specific social and environmental conditions (social determinants of health) associated with health disparities and health inequities.
- 4) Identify measurable health equity targets that demonstrate reducing disparities and improving health equity are critical goals to be achieved through program activities. This information must also be supported by data. For guidance on methodology to establish equity targets, review [2030 Target Setting Methodologies for Objectives in Healthy People 2030](#).

- 5) Outline specific evaluation strategies to measure the impact of program activities on decreasing and/or eliminating health disparities and health inequities.

The following are best practices toward eliminating disparities and achieving health equity and are not required, but highly encouraged.

- 1) Link proposed activities to health equity strategies identified in local, state or national planning documents. These documents include, but are not limited to strategies, goals and objectives outlined in [Healthy People 2030](#), the [State Health Improvement Plan \(SHIP\)](#) and local Community Health Assessments .

  - Healthy People 2030 - <https://health.gov/healthypeople>
- 2) Develop staffing plans where board members, leadership and program staff reflect the race, ethnicity, background, and/or culture of the population being served.
- 3) Identify up- and downstream approaches to address social determinants of health and reduce disparities. Upstream factors like food, housing and income insecurity that focus on addressing social determinants of health decrease barriers and improve supports that provide opportunity for people to achieve their full health potential. Downstream approaches focus on providing equitable access to care and services to reduce the negative impact of social determinants on health outcomes.
- 4) Establish non-traditional partnerships among different sectors of the community (e.g., faith-based organizations, local industries, businesses, universities, businesses, healthcare) that can provide valuable insight, new perspective, and more effective ways to achieve program goals. Non-traditional partners create opportunity to collaborate across sectors and may serve as a new source of support for the program.
