

At-a-Glance

Community Water Fluoridation

The Ohio Department of Health Oral Health Program (OHP) supports community water fluoridation by providing information and technical assistance to communities interested in initiating community water fluoridation.

“The Centers for Disease Control and Prevention has identified community water fluoridation as one of the 10 great public health achievements of the 20th century.”
— Ten Great Public Health Achievements—United States, MMWR 1999; 48(12):241-3.

Fluoridation Assistance Program

OHP offers limited funds when available for the start-up and maintenance of community water fluoridation. Communities of any size can request available funds for equipment used in the fluoridation feed system, or fluoride testing equipment used in the water treatment laboratory. Interested communities can access the Fluoridation Assistance Program [guidelines and application materials](#) under the Community Water Fluoridation tab on the OHP page of the Ohio Department of Health’s website.

Technical Assistance and Resources

OHP provides technical assistance and resources to communities interested in starting community water fluoridation, and promotes the use of evidence-based information such as [the Campaign for Dental Health — Life is Better with Teeth website](#).

Facts about Community Water Fluoridation

- Fluoride is found naturally in all water.
- Community water fluoridation is the adjustment of the fluoride that is found naturally in water to optimal levels to protect oral health.
