

Ohio Department of Health Seasonal Influenza Activity Summary

MMWR Week 41

October 9th– October 15th, 2022

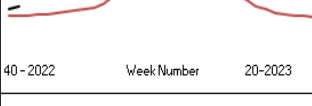

Current Influenza Activity:

During MMWR Week 41, public health surveillance data sources indicate minimal intensity for influenza-like illness (ILI) in outpatient settings reported by Ohio's sentinel ILINet providers. The percentage of emergency department visits with patients exhibiting constitutional symptoms and Fever/ILI specified ED visits increased and are above baseline levels statewide. Reported cases of influenza-associated hospitalizations increased. There were 28 influenza-associated hospitalizations reported during MMWR Week 41.

Ohio Weekly Influenza-associated Hospitalizations by Ohio Public Health Region

Southwest	9
West Central	10
Total	28

Ohio Influenza Activity Summary Dashboard:

Data Source	Current week value	Percent Change from last week ¹	# of weeks ²	Trend Chart ³
Influenza-like Illness (ILI) Outpatient Data (ILINet Sentinel Provider Visits)	3.22%	14.59%	↑ 3	
Thermometer Sales (National Retail Data Monitor) ⁴	0.48%	-2.04%	↓ 1	
Fever and ILI Specified ED Visits (EpiCenter)	2.11%	7.65%	↑ 3	
Constitutional ED Visits (EpiCenter)	10.28%	5.54%	↑ 3	
Confirmed Influenza-associated Hospitalizations (Ohio Disease Reporting System)	28	55.56%	↑ 3	

¹Interpret percent changes with caution. Large variability may be exhibited in data sources with low weekly values.

²Number of weeks that the % change is increasing or decreasing.

³Black lines represent current week's data; red lines represent baseline averages. The 2020-2021 influenza season has been omitted from the five-year baseline averages due to abnormal counts reported during the COVID-19 pandemic. A five-year average, which includes data from the 2016-2017 season through the 2021-2022 season, is displayed.

⁴Due to abnormally high thermometer sales during the COVID-19 pandemic, the 2019-2020 and 2020-2021 season data has been omitted. A 5-year average, which includes data from the 2015-2016 season through the 2021-2022 season, is shown.

State, Regional, and National Data:

Ohio Surveillance Data:

- The U.S. World Health Organization (WHO) Collaborating Laboratories System and the National Respiratory and Enteric Virus Surveillance System (NREVSS) has reported **756** tests for influenza performed at participating facilities; of these, **0** tested positive for influenza A(H1N1pdm09), **3** for influenza A(H3N2), **0** for influenza A (subtyping not performed), and **0** for influenza B (through 10/15/2022).
- No **pediatric influenza-associated mortalities** have been reported so far during the 2022-2023 influenza season (through 10/15/2022).
- No **novel influenza A virus infections** have been reported so far during the 2022-2023 influenza season (through 10/15/2022).
- Incidence of confirmed **influenza-associated hospitalizations** in 2022-2023 season = 46 (through 10/15/2022).

HHS Regional Surveillance Data*: During week 40 (October 2nd – October 8th, 2022), the percentage of outpatient visits for influenza-like illness (ILI) in Region 5 (Ohio is in Region 5) was 1.9%, which is below the regional baseline of 2.5%.

National Surveillance Data*: During week 40 (October 2nd – October 8th, 2022), most U.S. states reported Minimal or Low activity. The percentage of outpatient visits for ILI was 2.6%, which is **above** the national baseline of 2.5%. Two of 10 HHS regions reported ILI levels above their region-specific baseline level.

National activity levels and more information can be found at the following CDC pages:

- <http://www.cdc.gov/flu/weekly/usmap.htm>
- <http://www.cdc.gov/flu/>

2022-2023 Influenza Vaccine Components:

Egg-Based Vaccines		
A/B	Virus	Quadrivalent
A	A/Victoria/2570/2019 (H1N1)pdm09-like virus	X
A	A/Darwin/9/2021 (H3N2)-like virus (updated)	X
B	B/Austria/1359417/2021-like virus (B/Victoria lineage) (updated)	X
B	Phuket/3073/2013-like (B/Yamagata lineage)	X
Cell- and Recombinant-Based Vaccines*		
A	A/Wisconsin/588/2019 (H1N1)pdm09-like virus	X
A	A/Darwin/6/2021 (H3N2)-like virus (updated)	X
B	B/Austria/1359417/2021-like virus (B/Victoria lineage) (updated)	X
B	Phuket/3073/2013-like (B/Yamagata lineage)	X

*No trivalent preparations are available for cell and recombinant-based vaccines or for egg-based vaccine for the 2022–23 season.

Antigenic Characterization:

CDC has genetically characterized 396 influenza viruses collected since May 1, 2022. While there are little data to date, most of the H3N2 viruses so far are genetically closely related to the 2022-2023 Northern Hemisphere vaccine virus, but there are some antigenic differences that have developed as H3N2 viruses have continued to evolve.

Sources of Influenza Surveillance Data

- **National Retail Data Monitor (NRDM)-OTC Drug Purchases:** The NRDM collects over-the-counter (OTC) drug sales information from approximately 1,420 Ohio chain drug stores and grocery stores. For influenza surveillance, thermometer and adult cold relief sales are monitored on a weekly basis. Due to abnormally high thermometer sales during the COVID-19 pandemic, the data from the 2019-2020 and 2020-2021 influenza seasons has been omitted from the baseline average in the figure above. A five-year average, which includes data from the 2015-2016 season through the 2018-2019 season, and the 2021-2022 season is displayed.
- **Emergency Department Visits (EpiCenter):** EpiCenter collects emergency department chief complaint data from 206 hospitals and 15 urgent care facilities across Ohio in real time and classifies them into symptom and syndrome categories. Chief complaints from the constitutional syndrome category and the fever + ILI symptoms classifier are analyzed for influenza surveillance. A five-year average, which includes data from the 2016-2017 season through the 2021-2022 season, is displayed in the figure above. EpiCenter data from the 2020-2021 influenza season has been omitted from the five-year baseline average due to data instability and effects of the COVID-19 pandemic.
- **Sentinel Providers (ILINet):** Sentinel providers, through the US Influenza-like Illness Surveillance Network (ILINet), collect outpatient influenza-like illness (ILI) data. ILI is defined as a fever (≥ 100 F), and cough and/or sore throat. Providers report the total number of patients seen and the number of patients with ILI by age group on a weekly basis. Sentinel providers also submit specimens for influenza testing to the ODH laboratory throughout the influenza season. There are 107 sentinel providers enrolled in Ohio for the 2022-2023 influenza season. A five-year average, which includes data from the 2016-2017 season through the 2021-2022 season, is displayed in the figure above. ILINet data from the 2020-2021 influenza season has been omitted from the five-year baseline average due to abnormally low percent ILI counts reported during the COVID-19 pandemic.
- **Influenza-associated Hospitalizations (ODRS):** Influenza-associated hospitalizations are reported to ODH from local health departments and hospitals by direct entry into the Ohio Disease Reporting System (ODRS). Hospitalizations can be used as an indicator of the severity of illness during a particular influenza season. This condition became reportable in 2009. A five-year average, which includes data from the 2016-2017 season through the 2021-2022 season, is displayed in the figure above. Influenza-associated hospitalization data from the 2020-2021 influenza season has been omitted from the five-year baseline average due to abnormally low counts reported during the COVID-19 pandemic.
- **Influenza-associated Pediatric Mortality (ODRS):** Influenza-associated pediatric mortalities are reported into ODRS by local health department and hospital staff. Pediatric deaths can be an indicator of the severity of illness during the influenza season. This condition became reportable in 2005.

- **U.S. World Health Organization (WHO) Collaborating Laboratories System** and the **National Respiratory and Enteric Virus Surveillance System (NREVSS)**: The Ohio Department of Health Laboratory, Wright Patterson Airforce Base (both WHO Collaborating Laboratories), and 19 clinical laboratories located throughout Ohio participate in virologic surveillance for influenza through either the U.S. WHO Collaborating Laboratories System or NREVSS. Influenza testing data from these systems are compiled by the Centers for Disease Control and Prevention's (CDC) National Center for Immunization and Respiratory Diseases (NCIRD) and made available to the influenza surveillance coordinators in each state for analysis.
